

A stylized map of the Caucasus region, showing the Black Sea to the west, the Caspian Sea to the east, and the Mediterranean Sea to the south. A red dot is placed in the central part of the Caucasus, likely indicating a specific location of interest. The map uses a light green color for land and light blue for water.

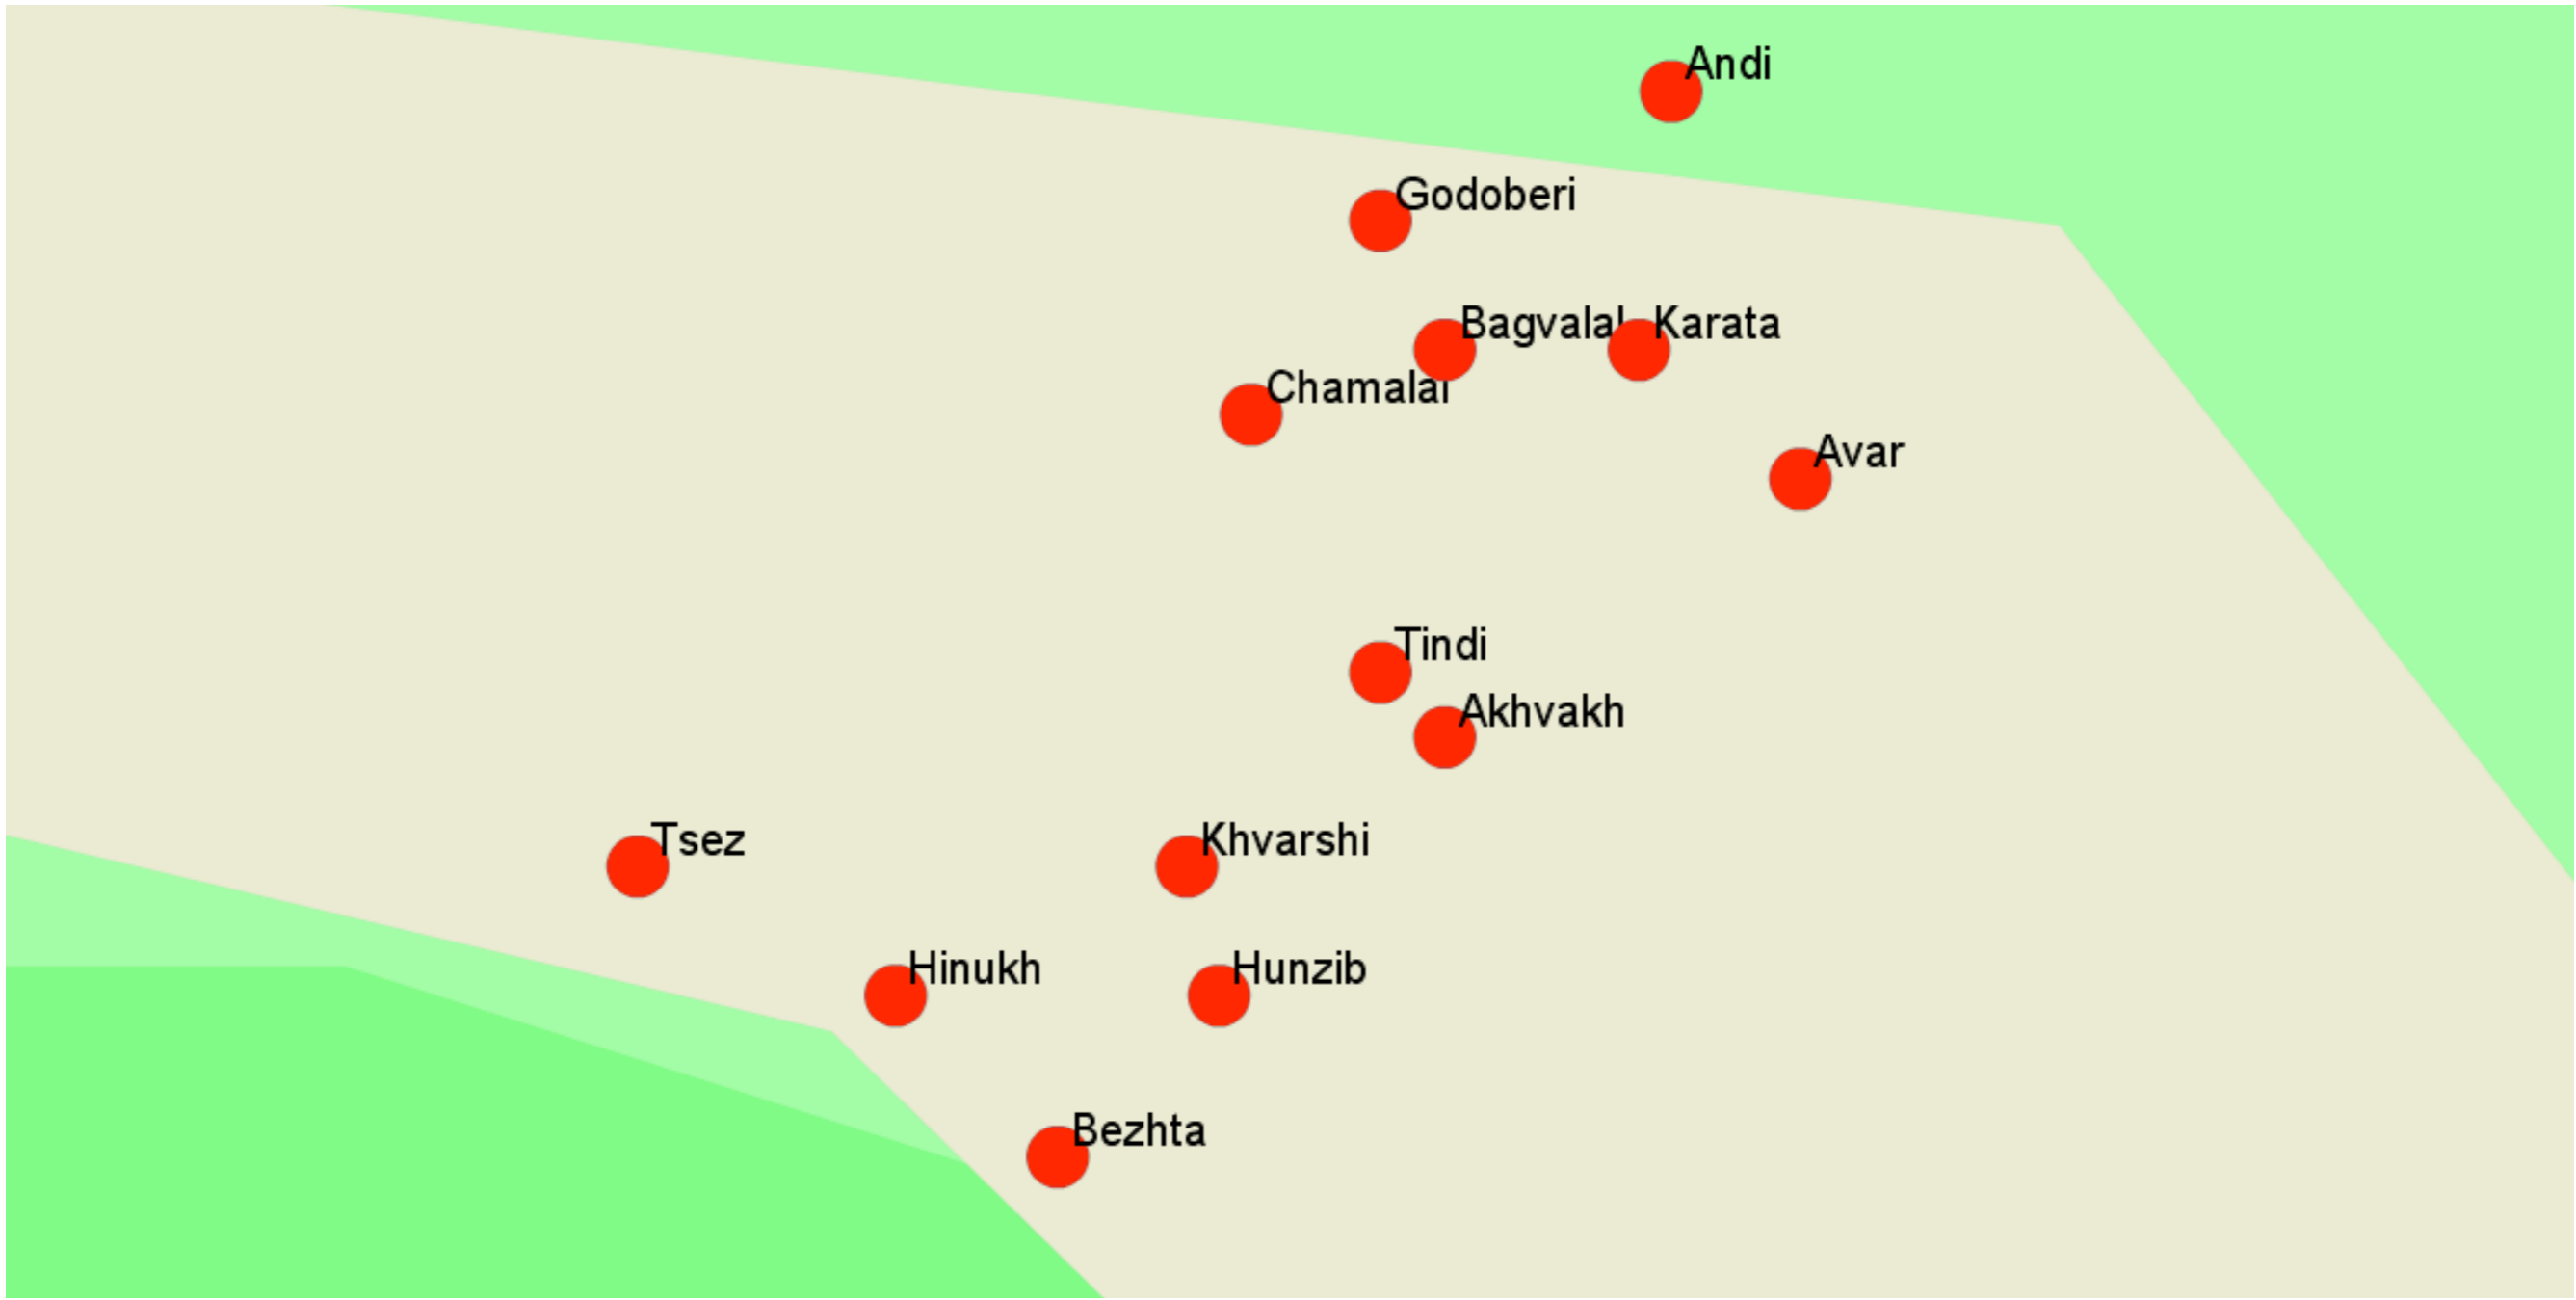

The distribution of glottalization in the languages of the Caucasus

Glottalisation in Bezhta

		bilabial	dental	alveolar	lateral	velar	uvular
Stops	voiced	b	d			g	
	voiceless	p	t			k	q
	glottalised	p'	t'			k'	q'
Affricates	voiceless		c	č	L		
	glottalised		c'	č'	L'		

Data

- Glottalised consonants in Intercontinental Dictionary Series (IDS), separated for:
 - kind of consonants
(place, phonation, gemination)
 - position of consonant in word
(initial, medial, final)
- Comparison with dictionaries for Tsez & Avar give almost identical results

Characterisation of the “type” of a language

- Bezhta:

0-0-0-0-0-1-21-10-4-6-0-0-0-0-0-4-78-24-61-
55-0-15-2-7-0-5-119-72-82-64

- Tsez:

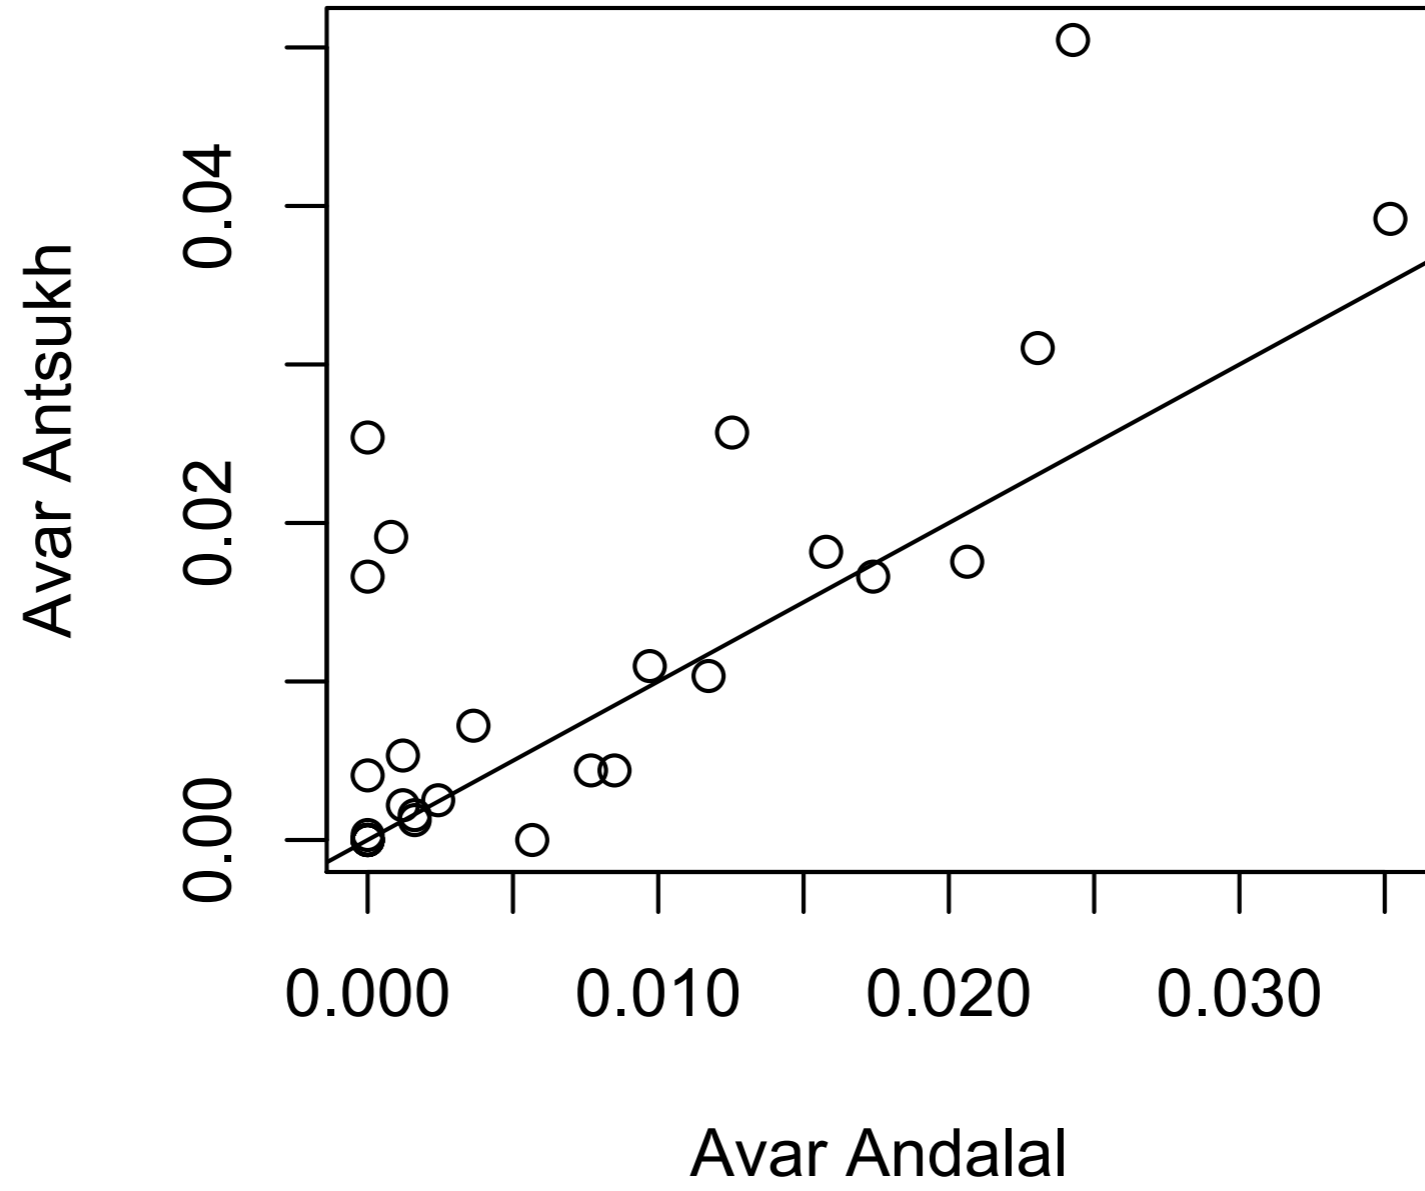

0-0-0-0-0-2-23-16-5-2-0-0-0-0-0-3-88-18-56-
37-0-2-0-0-0-4-111-45-48-85

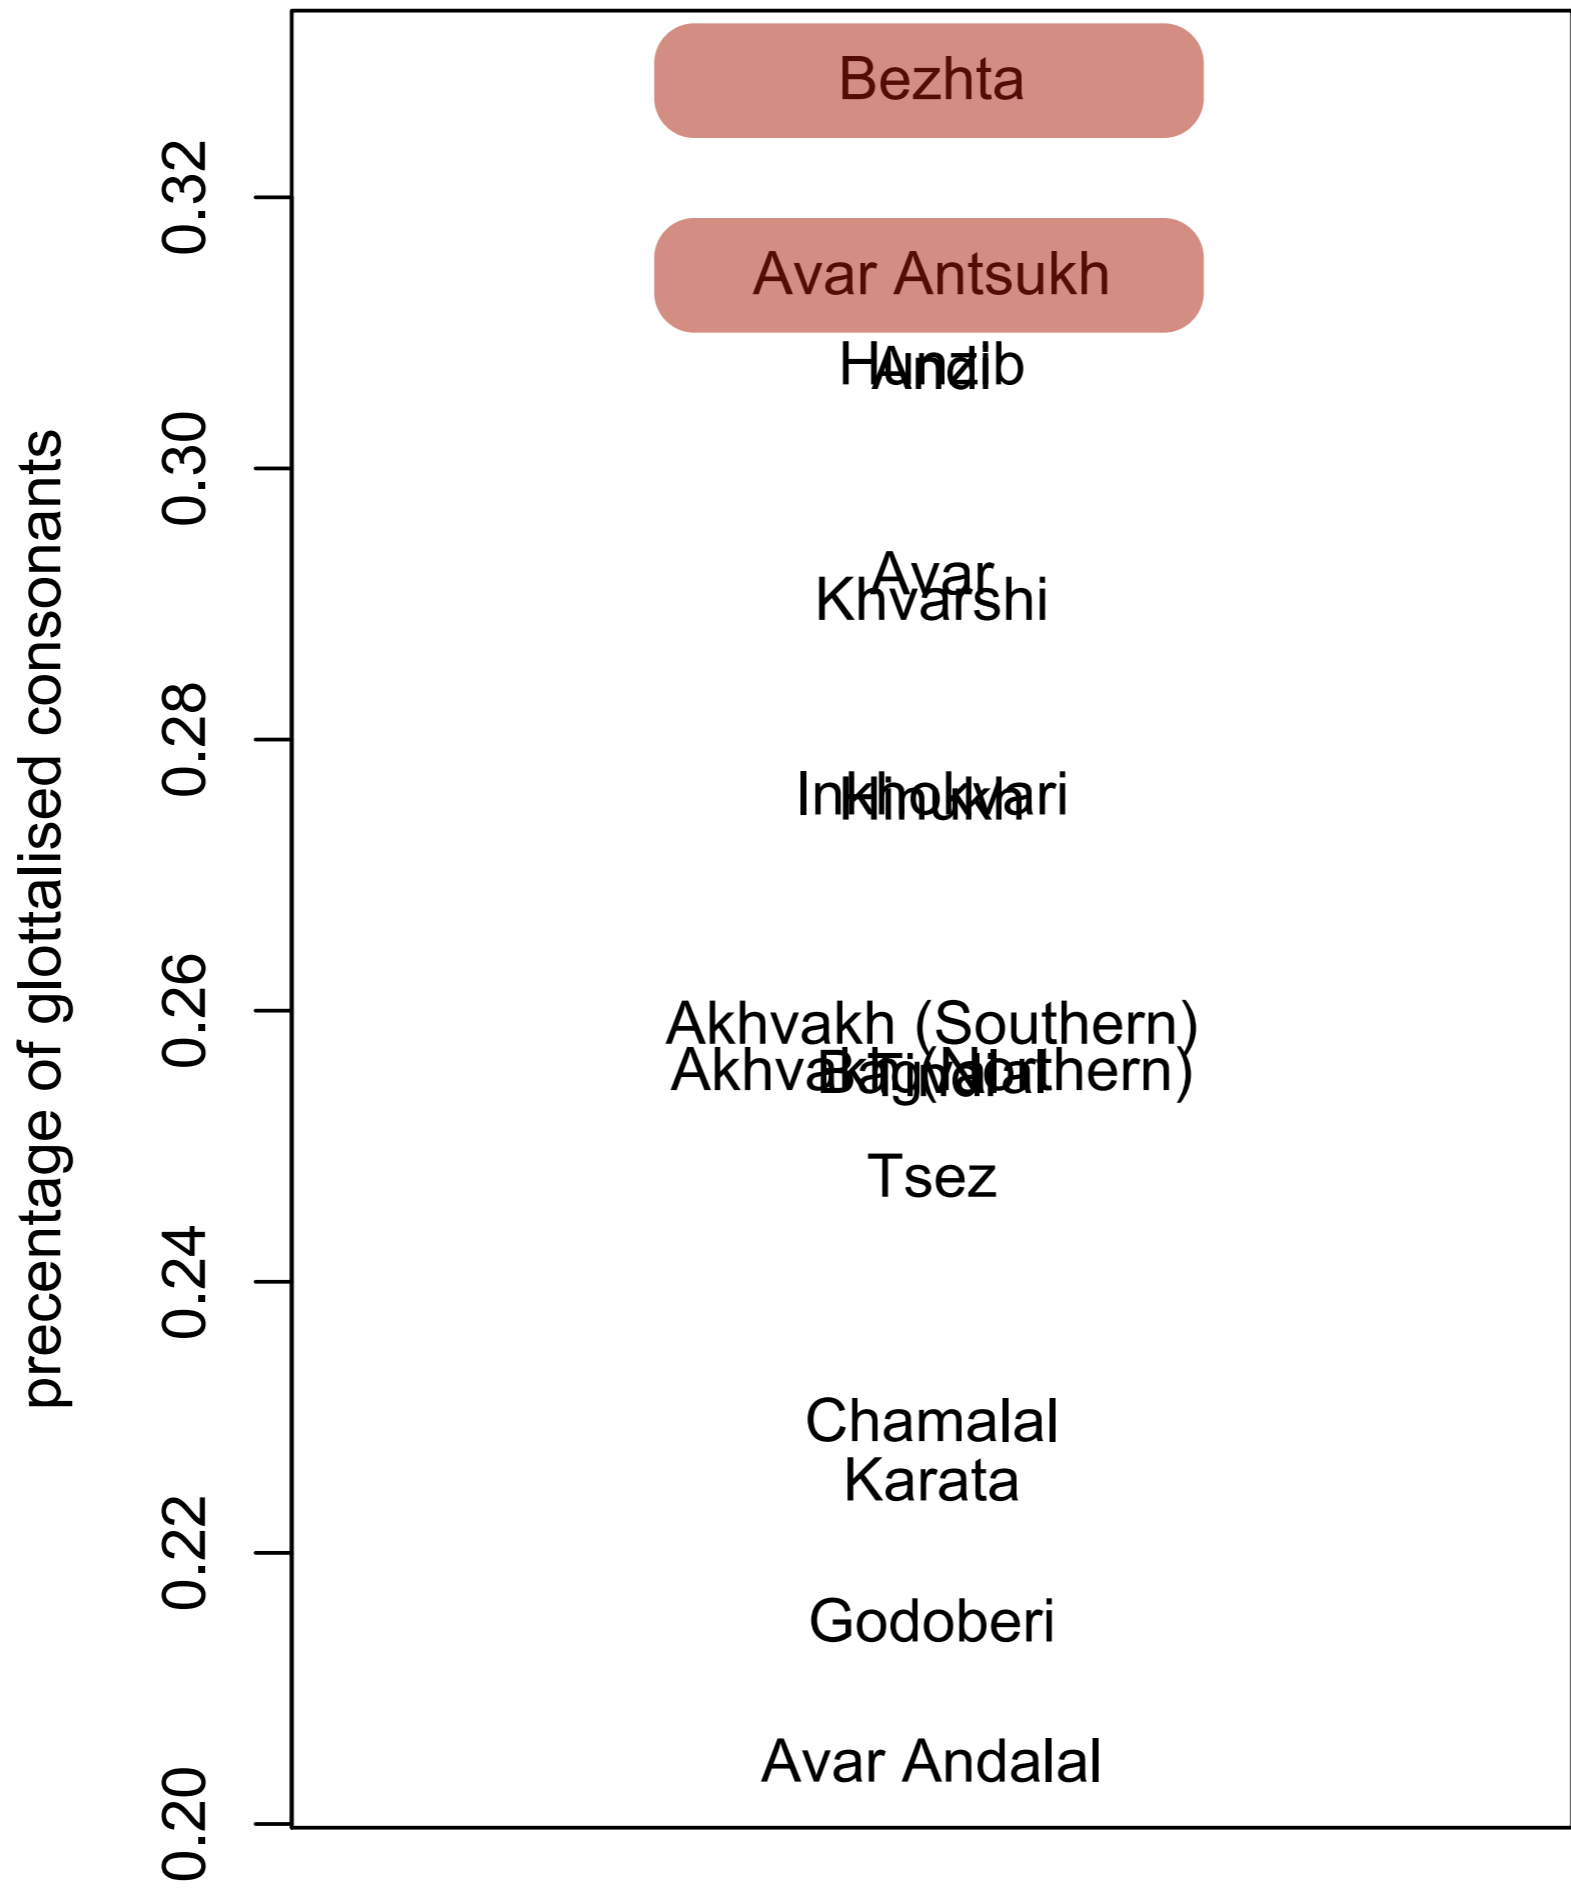

How to deal with such “types” ?

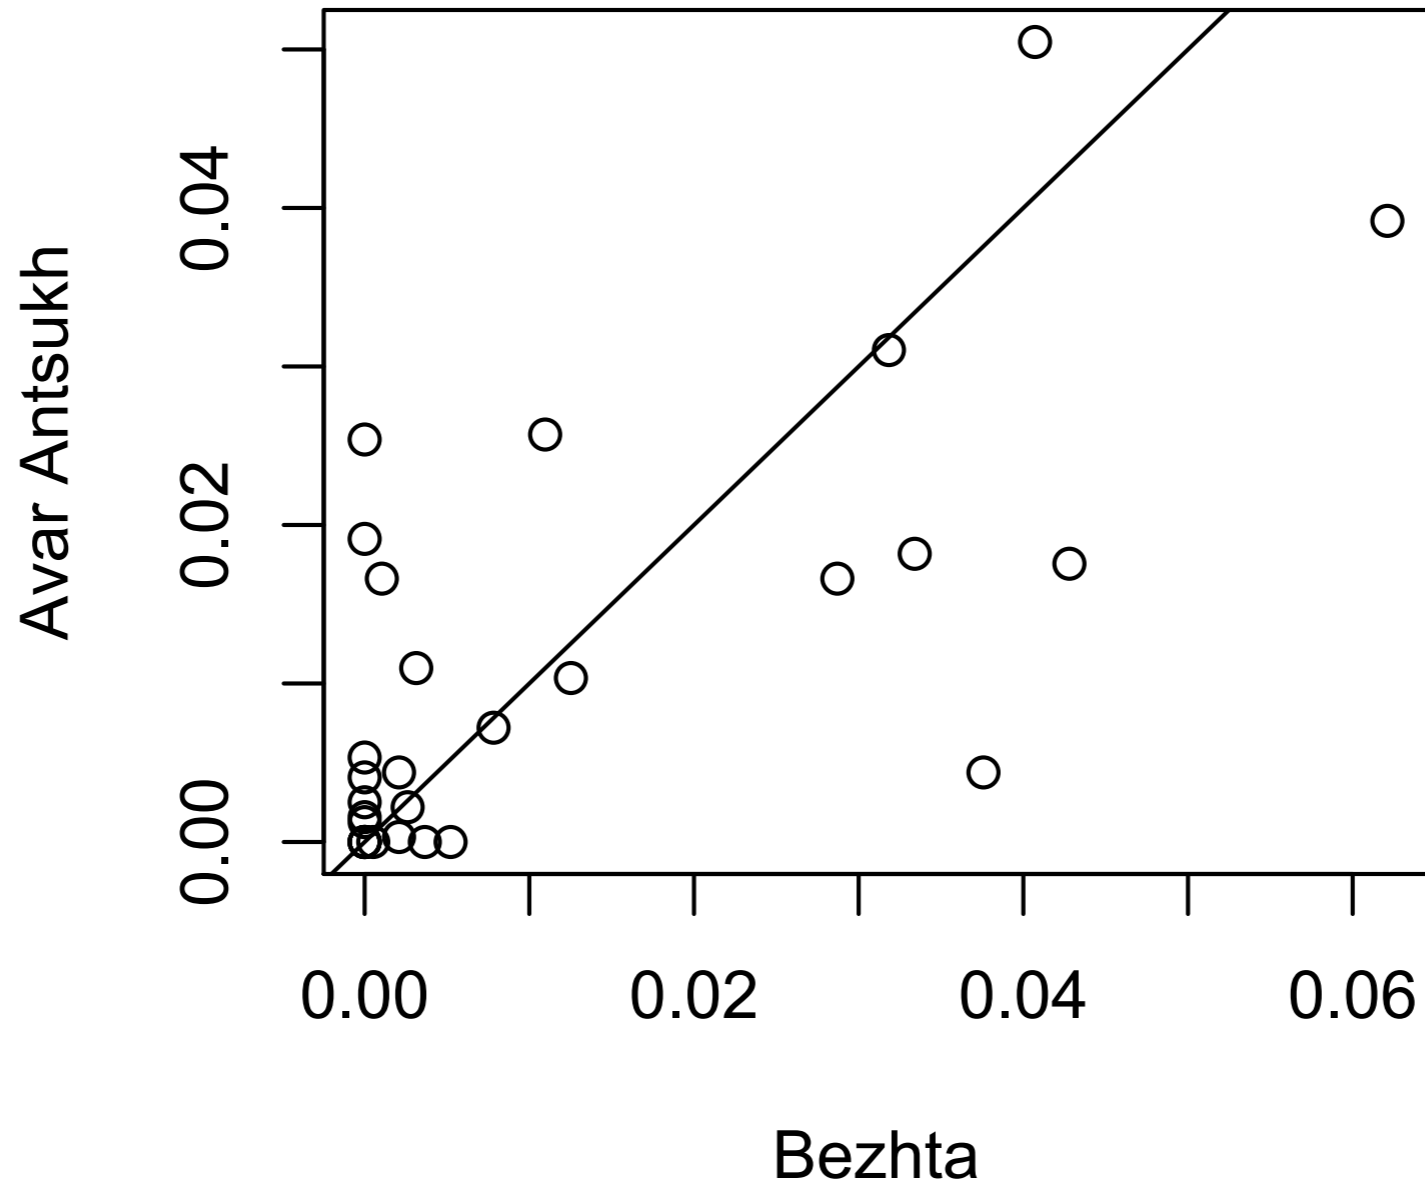

Typologizing languages

- Reduction A:
Choose a crucial property to group languages into types
- Reduction B:
Take a point estimator (e.g. the average)
- Do not reduce !

Compare “types”

organizing linguistic differences

- Include **as much as detail as possible** in the collection of the data
- **Do not reduce this detailed data** to make the typology
- Change of perspective from characterizing individual languages to **characterizing pairs of languages**
